

Level	Answer	Logic
1	iphone	Eye + Phone
2	Demystified!	Look at the file properties of image.jpg
3	10000000000	Google gets its name from the word Googol which is $1^{100}$
4	bluewhale	Decode morse in hint.txt to get hint
5	11111410510397109105	origami in ascii
6	LONEWOLF	Turn the image upside down, replace digits with corresponding letters. If you've watched GOT, you'll have heard the term lone wolf.
7	WhoLetTheDogsOut	HTML page comments
8	01000101	Look at the if conditions; "if 1" and "if not 0" both mean True
9	colombia	Find the coordinates in the image properties and Locate it on the map
10	plompyplatoon	It's just morse code in the audio file.
11	all small letters but with spaces	Duh xD
12	destinywins	Play the audio and identify the letters
13	11111001101101101001010101101001110110101101011001011101110010100001010000001	Path in binary string
14	breakinbad	$m + (-11) = b$ (i.e 11 steps back from m)
15	arcticcodevault	1st file: coordinates of arctic cordillera, 2nd: simple code, 3rd: vault
16	Cicada3301	It's a regular jigsaw puzzle. Btw do look it up on YouTube
17	corona_go	Method is explained well in the readme
18	ifyouaregoodatsomething,neverdoitforfree	The sentence you get after solving cryptogram is the password
19	youaregoodingaming	Play the game and reach 600 to see the password
20	921600	The resolution of the image (obtained by multiplying the height and width)
21	0441010101010105640101010	In the function just before main, you've to initialise i. Secondly, you've retype the semicolon which is actually a greek question mark (they both look the exact same)
22	oncmodaef	Qwerty to Dvorak keyboard letters
23	>>&^ <<	Trial and error, numbers shifted by smaller values, other operations with bigger numbers
24	squeakyonion	Just convert encoded brainfuck to plain text
25	3j9mdfA+GB7lvq0NFpeRdw==	There is a 14 digit key and a link to blowfish encryption page hidden inside sea.png. Image is of the rockband hootie and the blowfish. One of their songs 'Drowning' is the word to be encrypted.
